Transportation Engineering
and Architecture

Maribor, February 1, 2017

Invitation to the competition

Students' Association of the Faculty of Civil Engineering, Transportation Engineering and Architecture from Maribor, Slovenia organizes a variety of successful projects each year, such as field trips, visiting building sites and students' competitions. This year we organize the 8th traditional contest in building spaghetti bridges – How Strong is the Bridge?!

For this year's competition in constructing bridges we would like to invite students from the Faculties of Civil Engineering and Structural Engineering across Europe.

The international three day competition will be held at the Faculty of Civil Engineering, Transportation Engineering and Architecture in Maribor from May 3 to 5, 2017. Maximum 30 teams will participate; and there can be more than one team from each faculty. Each group can consist of three contestants. The competition will be finished on the third day with loading the constructed bridges with static load. There will be two categories: LOAD category (team with highest load wins) and DESIGN category (best design according to the jury and audience).

All details about the project and registration deadline can be found in the enclosure or on the website ajktm.fg.um.si or on e-mail ajktm.fgpa@um.si and jan.osterz@gmail.com

The How Strong is the Bridge?! project is supported by the Faculty of Civil Engineering, Transportation Engineering and Architecture, the Rector of University of Maribor and from various sponsor companies.

We would be honoured if you respond to our invitation.

Yours sincerely,

Head of competition
How strong is the bridge?!

Jan Osterž
